# CONSERVATION PLANNING

a field based short course for practitioners and students  
at Colorado State University

*join us for this*

**Three day course: March 28-30, 2011**  
Colorado State University, Fort Collins, Colorado

Crucial to the effective management of public and private landscapes is the skilled and accurate collection and management of natural resource field data. This four day course will advance these skills as they apply to managing field based conservation projects, making the likelihood of success much greater.

**Special early registration rate!**

- \$249 (register by March 11th)
- Standard registration: \$299

Learn from experts from the Colorado Natural Heritage Program and the Center for Collaborative Conservation at Colorado State University, Bio-Logic, Inc., and The Conservation Cooperative.

This course is designed for non-specialists who seek an opportunity to acquire valuable skills in field collection and project planning techniques. It will focus on small to medium-sized projects and is structured as a field base course, including significant field experience.

## Course Objectives

- Participant will develop a basic understanding of conservation planning and its application in achieving positive conservation outcomes.
- Participants will acquire field project planning skills and learn how these contribute to successful conservation outcomes.
- Participants will gain an understanding of field data collection techniques using a site specific approach to evaluating the pieces, patterns and processes which make up the architecture of conservation planning.
- Participants will learn some basic skills in the use of developing field maps using GIS and GPS technology for the purpose of completing field work for conservation plans.
